

Editorial

I am very much delighted to present you the twelfth issue of ICIS bulletin. In previous issues we have covered articles on ICIS modules, e Governance, Information Technology and so on.

The National Institute of Smart Government (NISG) training at Hyderabad and study tour to Korea has changed my vision and we have decided to make ICIS project as a part of e Governance project. It is learnt during training that independent and dedicated Project Management office is a must. The proposal of establishing Project Management office (PMO) is under consideration by the Government and it will be formulated after approval. NISG services will definitely benefit the department by value additions to ICIS project. Now we have started change acceptance round of all modules. The pre pilot testing is also planned from second week of April in which module software will be made available on independent computer at KDC and user can feed the data and check the module functions rigorously. The actual project data is now required for testing the flow of data from module to module. The hardware supply (PCs) is also expected very soon and all the users are requested to make necessary arrangements at their office for installation. We request you to convey the names of ICIS coordinator from your office for making ICIS champions. The next issue will be first anniversary issue and your articles and any catchy name for ICIS project are always welcomed.

Flavors of NISG Training on E-governance Feel the power of E-governance!

T.N.Munde-S.E.KDC, Pune.

How will you feel if

- 1) as the citizen, your Non-agriculture (NA)/Layout file is sanctioned and NA order is mailed to your inbox without having visited to any of the government offices ? (G for C service)
- 2) as a businessman, you are able to track your goods carrying transport vehicle (with GPS) just sitting in your office? (G for B service)
- 3) as a WRD employee, you don't have to visit frequently to Municipal corporations/ Zilla Parishad for the recovery of Non-Irrigation dues of water cess and it is automatically book-adjusted in the system against Cess payable to ZP? (G for G/E service)

This is possible with implementation of E-governance. As a part of NISG training, we visited Korea and actually experienced how the Korean people enjoy benefits of E-governance. It was light drizzling when we landed in Seoul on 5th Feb 2012. With ultra clean environment and well built roads studded with lush green landscapes, flyovers, beautiful high rise buildings, we felt like we are in a modern European city. Like any other Asians, hospitality of Koreans is appreciable. Korea started implementing e-governance project in 2001. In next nine years, it reached to peak by standing first in the United Nations summit on e-governance. All civil services are provided through single window system. Customer oriented e-governance services are given the top most priority. For the safety of the citizens (Public Relief services), a device is made available to Koreans. If it is felt like an emergency or danger, the button on the device is to be just pressed. Instantly, it will communicate to the nearest control room along with citizen's location and a rescue team will rush to the location. We visited the software data centre in Suwon. Information on Data back up and security of the data was given to us. Then we were lead to Video conferencing room. Though video conferencing is not a novelty for us, we were astonished by the spellbound progress of Koreans in a short period in the field of e-governance in totality. Next day, we visited Information Network Village. It was equipped with IT training centre, a community centre along with a cultural space with multimedia
